FOR IMMEDIATE RELEASE

FORT WORTH, TEXAS -- Exact Diagnostics announces the launch of the Zika Verification Panel and Zika Low and High Run Controls.

These Zika Verification Panel and Controls are value assigned using digital PCR, resulting in quantified values for Zika virus. These products were created using the Zika strain: PRVABC59.

“We understand the importance of having a quantified Zika Panel to offer to our customers in such a time of critical need.” said Jerry Boonyaratanakornkit, Head of Research and Development for Exact Diagnostics. “With digital PCR quantified panel members, laboratories can assess and monitor the performance of their molecular Zika assays.”

The Exact Diagnostics Zika Verification Panel consists of 5 panel members, ranging from 100 copies per milliliter to 1,000,000 copies per milliliter. Exact Diagnostics also offers a Zika High and Low Run Control. Both the panel and controls are formulated using Exact Diagnostics EDTA plasma. The Exact Diagnostics Zika Panel and Controls are manufactured following ISO 17511, helping ensure consistent results. Contact Exact Diagnostics for further information or visit the Exact Diagnostics Zika product page.

About Exact Diagnostics:

Exact Diagnostics is a molecular controls and standards company. In addition to Zika, Exact Diagnostics offers verification¹ panels and daily run controls² for BKV, CMV, EBV, HBV, HCV, HIV-1, and HPV Genotype Controls. Exact Diagnostics' BKV, CMV, EBV, HBV, HCV, and HIV-1 verification panels have a wide dynamic range. Exact Diagnostics manufactures following cGMP in a FDA registered/ISO 13485 Certified facility. Exact Diagnostics is a customer-centric, nimble business focused on the Infectious Disease, Genetics, and Oncology markets.

Contact Exact Diagnostics at customerservice@exactdiagnostics.com or by calling 817.989.9262.

¹Verification Panels are For Research Use Only. Not for use in diagnostic procedures.

²Run Controls are For In Vitro Diagnostic Use.
